ACKNOWLEDGEMENT

I would like to express my profound gratitude and deepest regards to my project team members for their valuable information, guidance, and support throughout the course of this project. Their assistance has been invaluable in helping me complete this assignment.

I am also obliged to Victor Banerjee sir for his exemplary guidance, monitoring, and constant encouragement throughout the course of this project. I would also like to thank the Fifth force for the amazing opportunity and great learning experience. The blessings, help, and guidance they have given me time after time shall carry me a long way in the journey of life on which I am about to embark.

I am grateful to all of them for their cooperation during the period of my assignment.

INTRODUCTION

Books are a big part of our world. They're small, and portable, and they always have a story to tell.

But what if you could find new ways to use them? What if you could sell them on the website?

That's exactly what we have done with Oxibook. We have created a platform that allows anyone to sell their books online and make money doing so. You can start selling your old books today!

The Oxibook lets you sell your old books for cash. You can list your books here, and once they're sold, we'll pay you via PayPal or Amazon Gift Card. That's it! Nothing else is required from you—you don't have to do anything except make sure your book is in good working condition and ready to sell.

We've got hundreds of thousands of books on our site at any time, so chances are good that someone will be interested in buying yours—and if they aren't? Well… I guess you could always keep them for yourself! ;)

PROJECT OBJECTIVE

In the global race of competitions, where every country and every business, wishes to compete for the best and bright, we people have come up with, an upstanding project. This project involves the design and development of a new eCommerce website, which aims at buying and selling books.

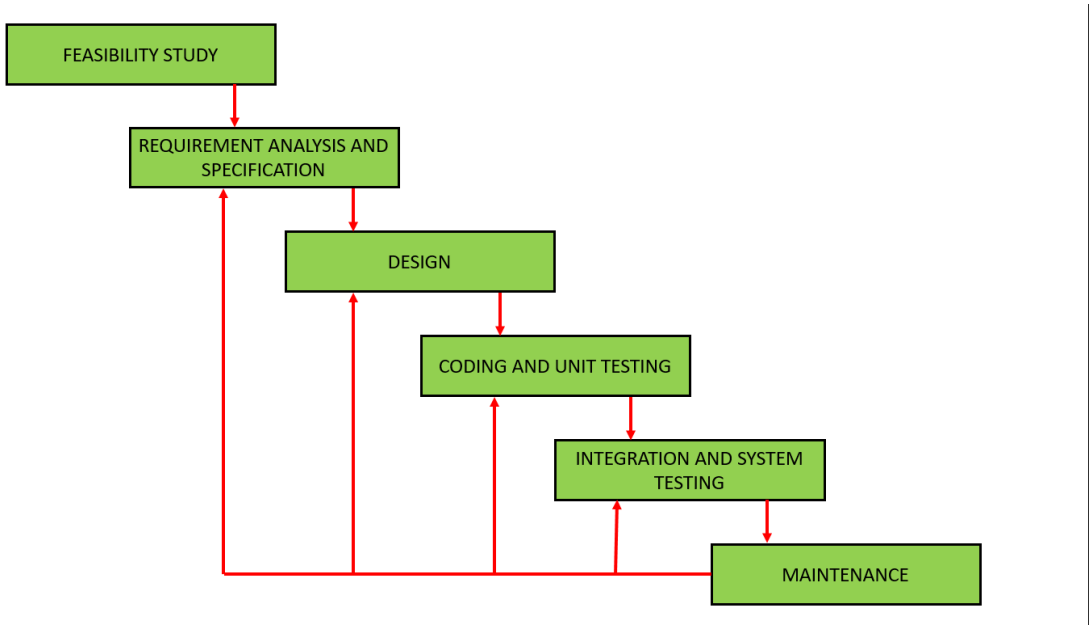
The main objective behind the making of this project is to bring an eCommerce website, which is within, easy reach of people.

Unlike other shopping sites, which contain a wide variety of products such as clothing, electronics, accessories, books, and many more, fails to pay a greater impact, on the" extensive diversity of books. So, to resolve these problems, with a great move, we have brought a site and the one and only one which aims to be the place with a huge variety of books and "only books"', which focusses on the demand of each and every customer and "with a claim of viewers need demand and satisfaction".

Although most of the online sites offer pdfs and e-books, if we see them from a magnified aspect, studying through e-books may lead to various distractions other than this it also has a capacity to hamper one's mental and physical health. Therefore, to heal this hazard, we are here with paperback as well as hardcover books, which in every way beneficial to all of us.

Last but not the least, this website aspired to be a global point with the maximum reach of customers, with their utmost satisfaction.

MODULARIZATION DETAILS



The Waterfall model works well when doing web development because it takes time to do all of these steps in order: Requirements --> Design --> Development --> Deployment --> Maintenance

Design

The main goals of this phase are:

- Design the website's frame work, including the user interface for the front-end and back-end.

- Create a web work flow design that will allow users to navigate through the site using an intuitive path through the components of the website.

MODULARIZATION DETAILS

Coding

This phase of a project is coding the website. The goal of this stage is to create the foundation for the rest of the site. This includes creating all of the HTML, CSS, and JavaScript that make up the website. The second phase is debugging the code. This involves finding mistakes in code and fixing them before it goes live. The third phase is adding additional features to your site through line-by-line design changes or adding new pages altogether.

Testing

The goal of this phase is to make sure that everything works correctly before moving on to the building site. This includes things like:

-Make sure your code is formatted correctly (so there are no errors in your code)

-Testing your site by looking for broken links or other errors

-Fixing any issues that arise during testing

MODULARIZATION DETAILS

Integration and system Testing

The system phase of web development is the part where the code and all of its dependencies are integrated into a single process.

The workflow involves checking each piece of code and making sure they are in order and functioning properly.

Then we will integrate the code into the system, making the workflow automatic. We will check if all the code is working properly and if there are any errors.

We will then go back and fix any errors or problems that we find. Once all errors have been fixed, we will check our final product again to make sure it meets our standards before moving forward with our project.

Maintance

When your website is new, it will look fresh and exciting. But as time goes on, things change and evolve. You will want to make sure that your content is still relevant and engaging for your audience. This can be done by adding new posts, updating the design of your site (including the colors), putting up new photos on social media, creating an engaging video series, etc.

You should also periodically check in with yourself about whether or not you still want to maintain this website. If you don't feel like doing anything with it anymore then it might be time for a change!

SOFTWARE ENGINEERING PARADIGM APPLIED

Software development is organised using the waterfall methodology. It is predicated on the notion that you complete a full job in a single step, building on the steps that came before. "Requirements" is the name of the first step. You list everything that has to be done on your website at this phase.

The waterfall model is the most commonly used software engineering paradigm in website development. The waterfall model describes the stages of a software project as they progress from conception to completion, and it is based on a series of sequential steps. The first step is requirement gathering. The second step is design and coding. The third step is testing the product or feature. And finally, deployment occurs when all of these steps have been completed successfully.

HARDWARE/SOFTWARE REQUIREMENT

Hardware Requirement

1. Laptop or Computer
2. CPU: Intel(R) Core(TM) i7-4870HQ CPU @ 2.50GHz.
3. Memory: 8 GB 1600 MHz DDR3.
4. Graphics: NVIDIA GeForce GT 750M 2 GB Intel Iris Pro 1536 MB.
5. Stable internet connection

Software Requirement

1. Vs-code
2. React js
3. Node js
4. Express
5. Postman
6. MongoDB
7. Bootstrap
8. Tailwind

APPLICTION WORK FLOW

Management, automation, and workflow optimization of business operations have never been simpler. With the help of our OXIBOOKS automation technology, you can quickly interface with the book world and quicken the digital transition. The Power of Process is at your fingertips thanks to OXIBOOKS' straightforward drag-and-drop interface.
The ideal synthesis of usability and strength: With OXIBOOKS, you can easily access and implement highly integrated, robust workflow with a simple-to-set-up, user-friendly website that makes books available at your doorstep, eliminating the need to battle to obtain your preferred book.

How OXI Works?

Market Place
List Vendors who sell the desired products
Get shoppers browsing through the merchandise
Create engaging deals & discounts
Customer purchases the desired products
Vendor/OXIBOOKS ships the merchandise to the customer
The product will be verified by the customer
A vendor gets the agreement value for the product minus the commission

Here, we'll give you a detailed breakdown of how OXIBOOKS operates. The creators of OXIBOOKS are responsible for this design. Who are today's aspiring young businesspeople who consider how OXIBOOKS functions?

APPLICTION WORK FLOW

Customer Experience:
Customer enablement sounds like a complicated marketing term, but it boils down to educating and empowering customers with the tools, resources, and information they need to make the most of our products or services. Ultimately, customer enablement is built on a simple principle. When customers succeed, everyone wins. So that we provide you immense discounts, coupons, and refunds on particular way of payment methods. We do provide you not only the modern product date and also we provide the antiquated products that you can get only from OXI. We do feel customers as partners and provide luck draws based on the discounts of the customer loyalty of utilizing the OXI platform.

01. OXI sales channels: OXI thus employs the paradigm of "X percent commission on the full sales worth paid to the vendor" in order to profit financially. Its sales are made through the various methods listed below. For every sale that OXI makes, OXI is entitled to a percentage (percent) cut of the gross sales amount, excluding taxes.

·Directly through an online marketplace
·Direct via a web-based application.
·Direct access via a mobile app for an online retailer (Android, iOS, etc.)
·Direct through Telesales (Customer phones and places order - this no longer occurs often)
·Through means of Affiliate Networks (Coupon Websites, Review Websites, and Bloggers)
·Social Media Purchasing and Selling (selling on social media)

APPLICTION WORK FLOW

02. How does OXI make money?

Here, we'll give you a detailed breakdown of how OXIBOOKS operates. The OXI founders are responsible for this model. They are striving young businesspeople who think about the way how OXIBOOKS functions.

·The virtual portal:

By amassing commission for the services from the vendors who utilize OXI as their selling and commercial e-commerce marketplace, the primary source of financial gain is accomplished. OXI permits a variety of sellers to sell through their website in exchange for a commission on sales to pay the costs of running the site while the vendors concentrate on creating a community.

·listing and reconnection fee:

The corporation can also make money by charging inclusion and convenience fees. The convenience charge is taken from the buyers in order to facilitate speedier delivery because the listing fee is paid by the suppliers. Billing covers the whole financial gain of the corporate OXI e-commerce marketplace; the convenience fee adds wrapping fees for the goods.

·Logistics:

A fee is collected from the sellers in exchange for delivering their goods. It offers its vendors services like those of alternative delivery companies. Paying for delivery services to fill the gap varies from location to location. Currently, the products are distributed by e-commerce fulfillment facilities. The many facets of warehousing, inventory control, billing, packaging, labelling, shipping, cash on delivery, payment, product return & exchange, and much more are all included in logistics services.

TESTING AND VALIDATION CHECK

Flow of Purchase

Let's assume the user lands on the webpage through a search engine. You can also say the user landed through a bookmark or any other means. After landing on the shopping website. User checks on the website if there is his specified book available on the front page. If not, then he'll naturally search for the book by typing its name. Then the user needs to hit the search button. And this way he goes to the search results page. Here user can find the specified book. And then that book can be clicked for more information. And in this step, the user lands on the dedicated page for the book. Here users can choose the "buy now" option by clicking on it. Some websites may have a "Buy" button. There is also going to be an option for quantity. And in some cases, you may find "Add to wishlist" and "Add to favorites". Let's discard those non-buyer options. And now that book is added to the "shopping cart". Let's proceed with the flow of the payment.

Flow of Payment

When your product is added to the cart. In this case, the product is a book. That book will show its price and also the quantity. You can see the total price of the product on this cart page too. Here you can click on the pay now button. On the next page, you get the option to choose the payment method. In the case of the payment gateway, you may find different payout methods.

TESTING AND VALIDATION CHECK

Test Scenarios for Cart

1. Confirm if the item is added to the cart.
2. Confirm if the quantity is as expected for the order.
3. Confirm if the delivery charges are added to the cart page.
4. Check the amount payable is correct.
5. Check if the cart has the place order and continue shopping buttons.
6. Check if the shopping cart shows the total savings amount.
7. Check the delivery date of the item.

After you continue the process on this page your order goes for the delivery page. And here you have to either use the existing address of yours or add new address. This way you can allow the website to deliver your product.

Test Scenarios for Delivery Address

1. Check if the delivery address page shows your address proper.
2. Check if the delivery address page has option to add or remove your address.
3. Check if the delivery options include the different prices for different dates.

After confirmation from this delivery address page, you'd be prompted for the payment options. In my case the payment page has the following options: 1.UPI. 2.Credit/Debit/ATM Card.3.Net Banking 4.Cash on Delivery

TESTING AND VALIDATION CHECK

Test Scenarios for Payment options

1. Check if the payment option phonepe, credit card, debit card, and net banking . is given
2. Check if the phonepe option allows UPI or the balance option.
3. Check if the cash-on-delivery option is available or not.
4. Check if the bank offers are accepted in this process.

Conclusion

After this step, you can find the process moves to the final stage where you're supposed to pay. And here, the testing options are different. But you get the idea of the flow of the payment and other options.

FUTURE SCOPE OF IMPROVEMENT

There's a lot we can do to improve our website.

We think the best way to do this is by adding a feature that allows us to offer other products for sale on the site along with the books. We already have a variety of products, so it would be nice if more people could buy things from us. And we think it would be great for our customers if they could browse through all of our products and find something that would fit their needs.

We know that this might take some time to implement, but we're committed to making it happen!

-Product Catalog

We are going to create a new feature for our eCommerce website, which is a product catalog. This will allow us to sell a wide variety of products from different brands so that we can offer our customers the best selection possible.

-New Designs and Colors

We will be updating our website with new designs and colors to make it more appealing to consumers. We want them to feel like they're browsing through an online store rather than looking at an old website that doesn't reflect current trends in design.
